Treatments

01. Active Acne Control.

02. Deep Pore Purification.

03. Pigmentation Correction.

04. Scar & Texture Refinement.

05. Fine Line Reduction.

06. Radiance Enhancement.

07. Subdermal Contouring.

08. Collagen Remodeling.

09. Structural Lifting.

01

Acne

VCare COE's Acne Transformation Programme goes beyond surface correction — we diagnose and treat acne at its root for long-term clarity and restored skin confidence. Our approach combines dermatological expertise with the world's first FDA-approved 1726 nm seboselective laser (AviClear®), which uses selective photothermolysis to precisely regulate overactive oil glands while being safe for all skin types. Supported by medical-grade peels, resurfacing technologies, and collagen-restorative therapies, this programme reduces active acne, controls future breakouts, refines pores, lightens marks, strengthens skin barrier, and restores a clearer, smoother, brighter complexion — with minimal downtime and results that continue improving for months.

02

Acne Scar

Acne scars and enlarged pores are signs of deeper collagen damage and structural imbalance in the skin, which is why VCare COE's scar correction programme uses the FDA-approved Erbium YAG 2940 nm Laser — the global gold standard in fractional ablative resurfacing — to precisely vaporise damaged tissue, stimulate deep collagen regeneration, refine pores, and restore smooth, firm, more even skin with minimal downtime. Beginning with a detailed scar-type analysis (ice-pick, rolling, boxcar, or post-inflammatory pigmentation), Treatment approaches include RF microneedling, regenerative peels, and collagen-boost therapies, laser resurfacing curated into a personalised treatment plan. The result is a visibly smoother texture, refined pores, improved elasticity, brighter tone, and renewed skin confidence — with safe, clinically progressive improvements seen across all skin types.

Open pores and uneven texture

Open pores and uneven texture are more than surface concerns — they reflect sebum balance, elasticity, and collagen support within the skin. At VCare COE, we take a transformative approach that detoxifies pores, balances sebum production, and rebuilds collagen for firmer, smoother, and visibly refined skin. Using globally trusted innovations like the Erbium Glass (1540/1550 nm) Fractional Laser — born from Korean precision, worldwide celebrated— and the FDA-approved Morpheus8 Fractional RF Microneedling system, we stimulate deep collagen renewal, tighten the skin's structure, and achieve a poreless, airbrushed finish with minimal downtime. The result is radiant, youthful skin with renewed clarity, smoother texture, and pores so refined they become almost invisible — restoring your complexion's natural grace and confidence.

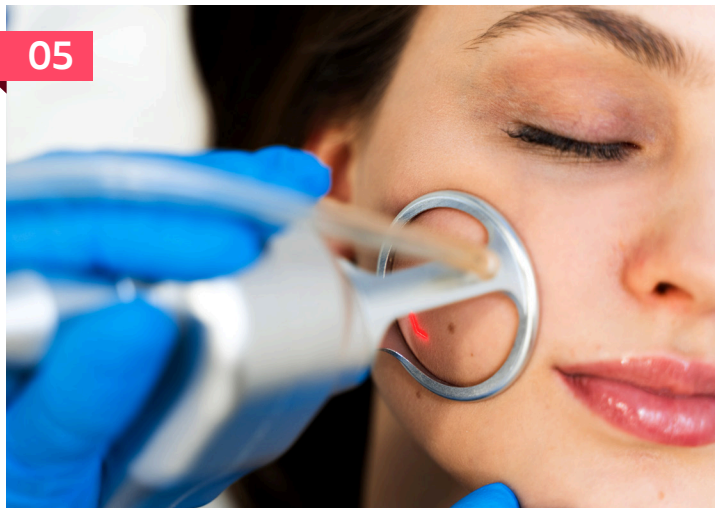

04

Skin Pigmentation

Skin pigmentation is more than dark spots — it reflects how skin responds to sun exposure, hormones, inflammation, and aging. At VCare COE, we treat pigmentation at its origin by targeting excess melanin, renewing surface cells, boosting collagen turnover, and strengthening the skin barrier for long-term clarity. Using globally acclaimed technologies such as the Q-Switch Laser — the gold standard for breaking down excess melanin safely — and advanced IPL therapy to correct pigmentation, vascular concerns, and textural dullness in a single protocol, we restore an even, radiant, and youthful complexion with precision. This comprehensive approach not only fades existing discoloration but also prevents future recurrence, revealing bright, luminous skin with confidence that lasts.

05

Wrinkles & Aging Skin

A double chin or softened jawline can result from submental fat, skin laxity, or muscle weakening — often resistant to diet or exercise. At VCare Centre of Excellence, our Korean-inspired 3D Contouring Protocol combines advanced technologies including the award-winning 1470 nm Diode Laser for precise fat melting and internal tightening, Triple Energy RF (InMode MiniFX + Forma) for non-invasive surface sculpting and elasticity restoration, and ULTRAcel HIFU for deep structural lifting at the SMAS layer — the same foundation surgeons target in a facelift. This multi-layer approach refines the V-line, sharpens jawline definition, and reduces double chin fullness with minimal downtime, delivering visible tightening after one session and progressive contour enhancement over 6–12 weeks. Safe, FDA & CE-certified systems ensure naturally sculpted, long-lasting results — redefining your facial angles with precision contouring, the Korean way.

06

Double Chin & Jawline Contouring

A double chin or softened jawline can result from submental fat, skin laxity, or muscle weakening — often resistant to diet or exercise. At VCare Centre of Excellence, our Korean-inspired 3D Contouring Protocol combines advanced technologies including the award-winning 1470 nm Diode Laser for precise fat melting and internal tightening, Triple Energy RF (InMode MiniFX + Forma) for non-invasive surface sculpting and elasticity restoration, and ULTRAcel HIFU for deep structural lifting at the SMAS layer — the same foundation surgeons target in a facelift. Safe, FDA & CE-certified systems ensure naturally sculpted, long-lasting results — redefining your facial angles with precision contouring,

Lip Enhancement & Perioral Tightening

07

Aging, sun exposure, and repetitive expressions can lead to fine lines, lip thinning, and sagging mouth corners — altering the natural balance of your smile. At VCare COE, our non-surgical 3D Perioral Rejuvenation protocol restores youthful definition using advanced European and Korean-inspired technologies such as 447 kHz TECAR Therapy for deep cellular regeneration and natural muscle lift, and Morpheus8 Fractional RF Microneedling for precise collagen remodeling that smooths vertical lip lines and enhances lip border firmness. With minimal downtime and subtle, Korean-style refinement — no fillers required — this treatment rejuvenates texture, lifts corners, and restores a soft, naturally voluminous appearance around the lips, ensuring your expression remains elegant, confident, and beautifully refreshed.

08

Under Eye Rejuvenation

The under-eye area is the first to show signs of aging due to its delicate structure — leading to dark circles, fine lines, puffiness, and hollowing that topical creams alone cannot correct. At VCare COE, our 3D Eye Rejuvenation protocol restores brightness and firmness at every depth using globally trusted innovations — the Alma Harmony Erbium Glass Laser for gentle resurfacing and instant smoothness, 447 kHz TECAR Therapy for cellular repair, improved microcirculation, and muscle lift, and Morpheus8 Fractional RF Microneedling for deep collagen remodeling and long-term tightening. With minimal to zero downtime, this layered approach reduces wrinkles, strengthens skin elasticity, fades pigmentation, and revives youthful contour — delivering refreshed, brighter, and naturally lifted eyes with precision, comfort, and clinically proven results.
